**Semantic Mapping**

**Purpose:** To help students identify important ideas and how these ideas fit together.
To provide an alternative format to the outline.

**Procedure:**
The teacher should model mapping a few times before the students do this on their own.

There are three components to a semantic map:
1. **Core question or concept:** this is a key word or phrase that is the main focus of the map.
2. **Strands:** subordinate ideas that help explain or clarify the main concept. These can be generated by the students.
3. **Supports:** details, inferences and generalization that are related to each strand. Supports clarify the strands and distinguish one strand from another.
